About me

I'm Ian Wijma and I have 7+ years of software development experience, where 5 years are professionally as a full stack developer. I have a great drive to think with existing and new and exciting technologies.

Employment history

Senior Software Developer at **StoreKeeper Company B.V.**

StoreKeeper B.V. is an eCommerce company based in the netherlands. They build SAAS commerce solutions ranging from webshops to POS systems in the store. Because it was a small team, everyone knows and works on the full stack.

Responsibilities:

• Design and develop new features

• Design and implement devOps tools (CI/CD)

• Guiding new and junior developers

• Simplify complex UI

Technologies:

• JavaScript/ TypeScript (NodeJS, React, React Native, Backbone, ES2020)

• PHP (Laravel / Symfony / In house framework)

• PostgreSQL / MySQL

• Git / Mercurial

• Linux server management

Achievements:

• Design and deploy a cash register with full hardware integration

Software Developer at **Upx Systems B.V.**

Upx Systems B.V. was a company that developed custom solutions for their customers. Here I worked as a frontend developer. This company changed to what is now StoreKeeper B.V.

Responsibilities:

· Communicate with the customer

· Design, develop and deliver custom solutions

· Work in a team of developers, designers, marketing

· Estimate features for a customer quote

· Guiding and work with developer interns

Technologies:

· JavaScript (Backbone, Cordova)

· PHP (In house framework)

· Mercurial / Git

· Linux desktop

Achievements:

· Become a professional programmer from a hobbyist programmer.

Trainee at **Nubium**

Nubium is a company that does online marketing and web development. They had their own
CMS and owned multiple products surrounding that CMS.

Responsibilities:

· Make their customers websites mobile friendly

· Apply changes to their customers websites

Technologies:

· PHP (In house CMS)

· HTML5 & CSS3

· FTP

Achievements:

· Here I learned that I'm a quick learner, and school was slow paced.

Education

Diploma of Software Development from **ROC van Twente**

Once I finished my IT support study, I decided to lean on my interest in programming, due to my prior knowledge of programming in my own time, this study was boring and repetitive for me. After I graduated with ease and my internship with Nubium, I decided I wanted to learn while working. So I started working full time for Upx Systems B.V.

Diploma of IT support from **ROC van Twente**

Here I learned everything about IT support, communicating with non-technical people and working with hardware (servers, desktops and laptops). Because of my interest in computers from a young age this was an easy study.
