Profile

I'm Ian Wijma and I have 5+ years experience developing SAAS solutions and products as a full stack developer, with a great drive to think with new and exciting technologies.

Employment history

Senior Software Developer at **StoreKeeper Company B.V.**

StoreKeeper is a company based in Enschede, The Netherlands. They build SAAS commerce solutions for offline and online shops. Where I started working onsite, but since I moved to Australia I have worked remotely for more than a year.

Responsibilities:
· Design and develop new features
· Track down and fix bugs
· Design and develop devOps tools (CI/CD, deploy tools etc.)
· Integrate with hardware (Cash registers and printers)
· Guiding new and junior developers

Achievements:
· Create and deploy a production ready cash register system with software

Software Developer at **Upx Systems B.V.**

UPX was a company that made custom solutions for their customers. Here I learned to program
on a professional level. Here I worked as a front-end developer. This company changed it's
name and course to what became StoreKeeper Company B.V.

Responsibilities:
· Meet up with the customers to get the technical details for a technical design
· Design the UI with a mock-up program for internal review
· Estimate features for a customer quote
· Work with a small team of 2 - 5 people as a front end developer with back-end developers
· Deliver the product in a timely manner using a kanban board.

Achievements:
· One of my biggest achievements was to transition from a hobby programmer to a professional programmer.

software

Trainee at Nubium

Nubium is a company that does online marketing and web
development. They had their own
CMS and owned multiple products surrounding that CMS.

Responsibilities:
• Make changes to their customer's websites
• Make their customer's websites mobile friendly

Achievements:
• Here I learned that I learn quicker on site than in school.
Which I considered being too slow paced and eventually helped me
with my decision to not go to a university.

Warehouse person at Albert Heijn

I worked for Albert Heijn for 3 years, where after I had the
choice to become team leader, but chose to become a software
developer.
Albert Heijne is The Netherlands biggest grocery store. Which
holding company has multiple other major store chains.

Responsibilities:
• Emptying trucks into the warehouse
• Processing the new stock
• Ensuring customer happiness

Achievements:
• Working hard in a team environment
• Working my way up from a filler to the warehouse
• Working organised, ensuring the people after my shift have
everything neatly in order.

Education

Diploma of Software Development from ROC van Twente

Once I finished my IT support study, I decided to lean on my
interest in programming, due to my prior knowledge of
programming in my own time, this study was boring and repetitive
for me. After I graduated with ease and my internship with
Nubium, I decided I wanted to learn while working. So I started
working full time for Upx Systems B.V.

Diploma of IT support from ROC van Twente

Here I learned everything about IT support, communicating with
non-technical people and working with hardware (servers,
desktops and laptops). Because of my interest in computers
from a young age this was an easy study.
