Summary

Hey there, I'm Ian Wijma and moved from The Netherlands to Australia in August 2019. I have 5+ years experience in developing solutions and products.

Where I have worked on front-end, back-end, integrations and deployed solutions.

I have professional experience with techniques like JavaScript, NodeJS, PHP, PostgreSQL, MySQL, React, React Native and WordPress.

I also love to play around with different techniques in my spare time like TypeScript, Electron, GO, Rust, Java, MongoDB, vueJS and many others.

I'm also a big advocate of Linux and have professional and personal experience with the system. Personally I run on Debian based OS's but I have experience with other flavours as well.

Career History

Senior Software Developer at StoreKeeper Company B.V.

Sep 2017 - Present (3 years and 1 month)

StoreKeeper is a company based in The Netherlands where I helped build their eCommerce solution from day 1. Initially I started there as a front-end developer, but later on worked on the back-end as well.

StoreKeeper is an innovative company where there was one source of truth, a backoffice, and consisted of multiple Point of sales. Think about integration with various webshops (WooCommerce, PrestaShop ETC), A Cash Register with In house software and a Portal System for B2B sales. All managed from one System.

Here I worked on all aspects of the solution. Including React Native apps which allow you to manage your products and stock from your phone and setting up temporary Cash Registers for events using an table app. Running our Cash Register software.

Here I worked with JavaScript, React, React Native, PHP, PostgreSQL, NodeJS, Linux and VueJS.

Beside our product I also worked on a bunch of internal tools using Laravel and Symfony for managing and deploying. We also build internal sales solutions to allow the sales team to create and finalise contracts.

Software Developer at Upx Systems B.V.

Aug 2015 - Sep 2017 (2 years and 1 month)

At UPX I started my professional career, using my trainee and personal experience I managed to land a job at this company where custom solutions where written.

My role here was mainly front-end and apps. where we worked with JavaScript, Cordova and a REST full API to ensure the solution worked cross platform (Web and app)

I worked here on solutions like CRM, Social Media for Companies, Product Management and eCommerce. Where we had multiple version for each solution with customer specific needs.

Here I worked till the company changed its name to StoreKeepers B.V. start working on an eCommerce SAAS solution.

Trainee at Nubium

Jan 2015 - Jun 2015 (5 months)

At Nubium I created sites with their custom made CMS, this was around the time mobile websites where required by google. So there was a rush for mobile compatible websites, where I mainly worked on.

Warehouse Storeperson at Albert Heijn

Jul 2010 - Aug 2013 (3 years and 1 month)

I started out as a clerk, but quickly found interest in doing to warehouse. Where I unloaded the truck of products and loaded the truck with access paper, plastic, returned goods and bottles. Where after I needed to organised them quickly into the warehouse. Where after I continued working on the vegetable and fruit department. around the end of my shift I needed to clean up and organise the warehouse for the next day.
